

DETECT & DEFEND

Job Specification: Senior Software Developer

The Company

Scyron is a small, rapidly expanding, progressive software company, operating in the intelligent surveillance and digital evidence management arena. We offer a range of innovative and evolving solutions for the automated capture, transmission, analysis, presentation and management of digital video and other digital media. Our customers range from police and criminal justice services to private security companies, both in the UK and across the world. We are based in comfortable, well equipped offices on a new high tech business park in the West Midlands.

The Opportunity

We are keen to expand our small, dedicated software development team with the addition of two new senior software engineers. This is an opportunity to join Scyron at an early stage in its development, to grow your career with the growing business, and to play a very significant part in the success of the company.

You should have at least 5 years experience in the development of client server applications using the Microsoft .NET framework. You should be a seasoned OO programmer, familiar with C++ and C#, and an advocate of cutting edge software development practices. You should have extensive experience with the development of GUI intensive, networked applications involving video and multimedia. Experience with DirectShow, with SourceSafe, with web development, and with SQL database development would also be very useful.

The Person

You should be qualified to degree level in an engineering discipline and be comfortable working within a small, collaborative team of bright, likeminded peers. You need to be able to hit the ground running and to thrive in an environment with minimal guidance where innovation and delivery are key to success.

You must enjoy getting involved in all aspects of the business, dealing directly with customers and partners, and contributing towards the product and technology strategy, as well as helping to architect and develop our software solutions.

You need to be organised, professional and pragmatic, willing to commit to a shared vision for the future of our business.

The Reward

In return for your skills and commitment we offer a market leading salary and benefits package, and a flexible, friendly working environment.
