

## Live video surveillance with full Pan / Tilt / Zoom camera control

**DARC vision** provides secure and reliable transmission of real time video streaming over fixed and wireless networks, including 3G and GPRS. For the first time, you have high quality video, up to 25fps, over networks which were previously unable to transport video.

### Deployed in minutes

The encoders are complemented by secure servers, software viewing clients and recorders that allow real time video transmission with zero latency. Deployed in minutes, **DARC vision** reduces the time and costs of established fixed line communications.

### PTZ control for any camera

With PTZ control for any camera, you have maximum flexibility without the need to return to the scene under surveillance.

The system's unique patented and optimised H264 codec technology also ensures the system does not skip frames so all essential information is captured for streaming to the people who need it and for evidential purposes afterwards.

### At a glance

Real time 3G and GPRS video streaming anywhere in the world

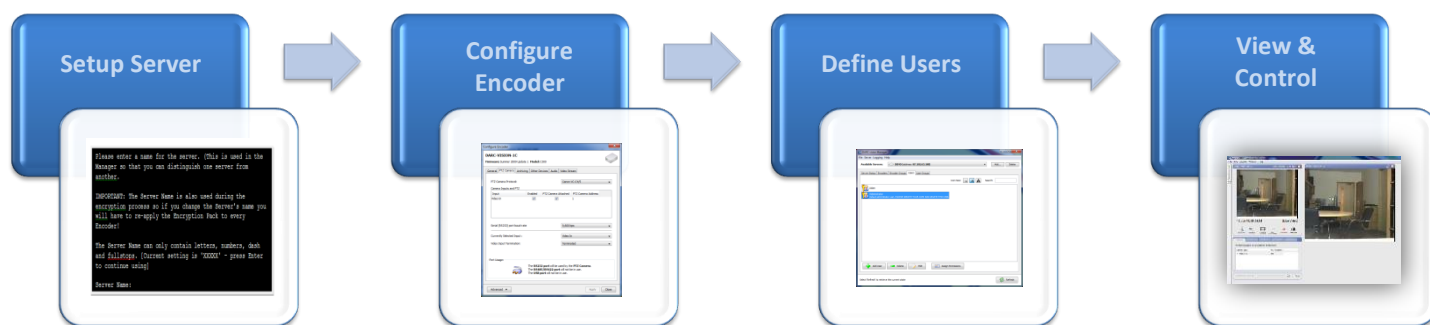

Secure transmission on servers, laptops, mobile phones or PDAs

Multiple users can view the live video streams

Servers can manage multiple encoders

Remotely control one Pan/Tilt/Zoom camera per encoder

### In action

- Easy setup of system
- Multi viewer support
- Multi encoder support

- Deploy in minutes
- Multi camera model support
- Intuitive User Interface

- Transmission Encryption
- AES-128 / AES-256
- Only adds 1-3% bandwidth overhead

- Audit logging
- Secure firewall port protection
- Encoder access control
